

The IACHEC High-Resolution Working Group's view of

the X-ray emission-line spectrum of Capella

Andy Pollock
European Space Agency
XMM-Newton RGS Calibration Scientist

Expert advice : Randall Smith, Nancy Brickhouse & Giulio Del Zanna

5th IACHEC @ Woods Hole, Massachusetts, USA
2010 April 12-15

IACHEC High-Resolution WG objectives

- Instrumental wavelength reference frame (cf effective area)
 - dynamics of plasmas
 - $1\text{m}\text{\AA}$ at $12\text{\AA} \Leftrightarrow 25\text{ km/s}$
 - atomic physics
 - observed λ for databases
 - ATOMDB
 - CHIANTI
 - NIST
 - laboratory astrophysics
 - LLNL EBIT
 - theoretical calculations
 - HULLAC and other codes
 - $\Delta\lambda < 35\text{ m}\text{\AA}$
- Methods
 - DH's combined Chandra HETG spectra
 - Compare phenomenological & physical models
 - Exhaustive (and exhausting) tabulation of lines ion-by-ion
 - vapec & vmekal

HETG spectra and models of Capella

HETG spectra and models of Capella

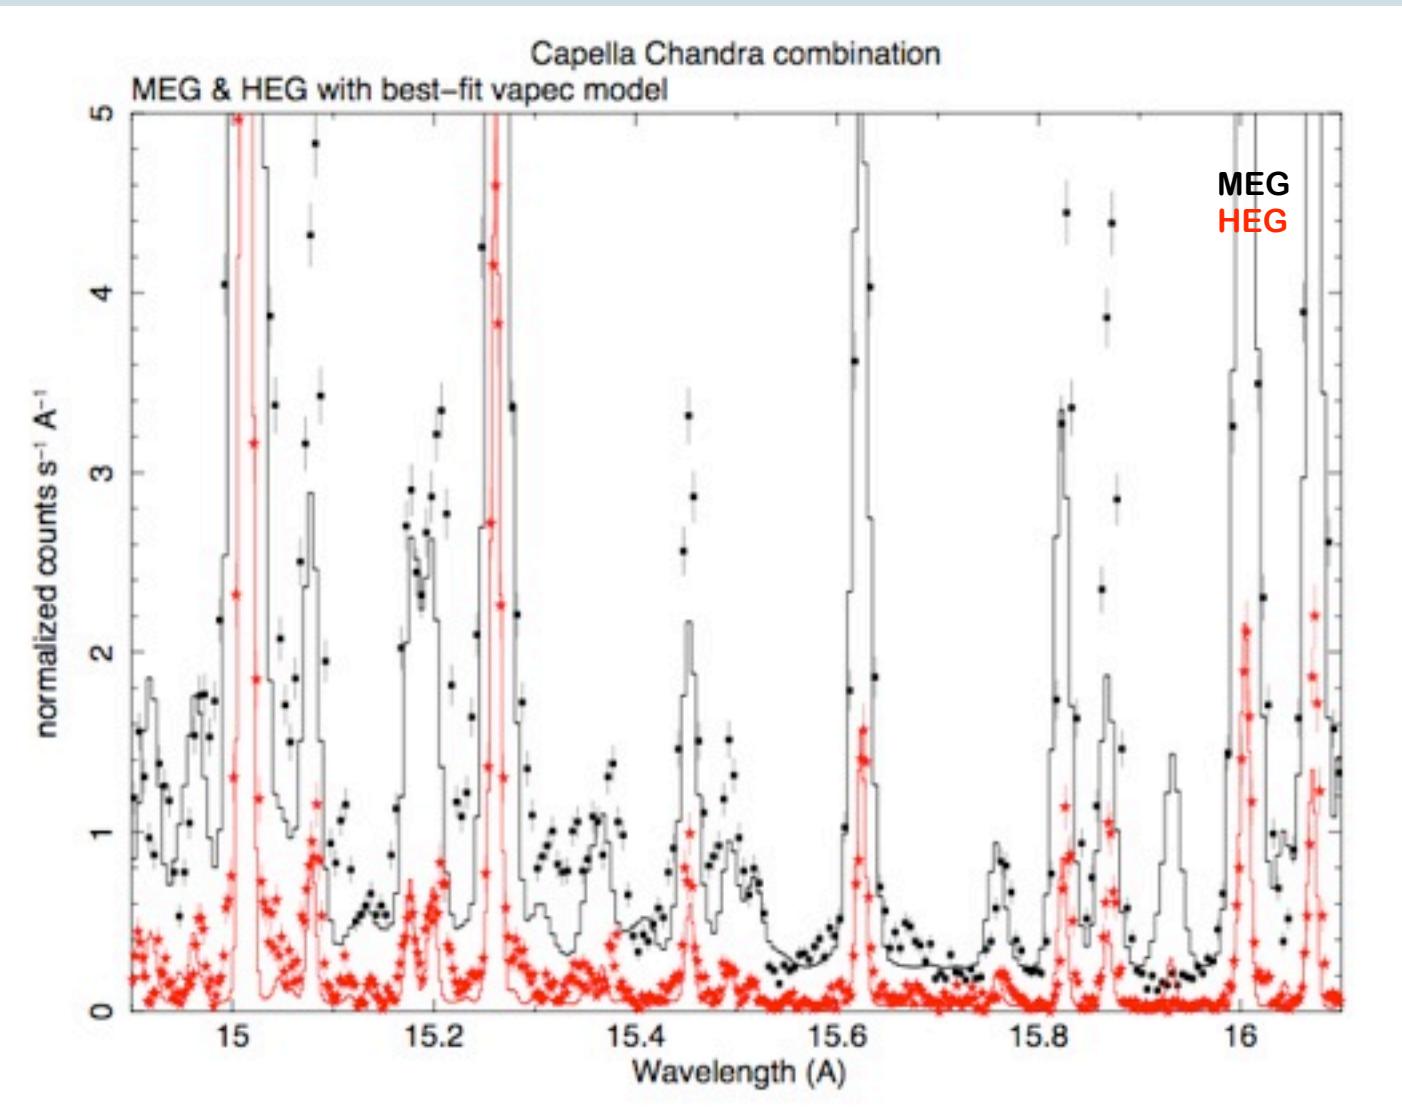

HETG spectra and models of Capella

HETG δ -function models of Capella

Issues for the IACHEC WG this week

- Capella recruitment
- HETG analysis review
 - high-resolution RMFs
 - $25 \times 1\text{\AA}$ interval vapec line-prospecting charts available
 - continuum questions
 - too high in vapec
 - APED NoLine with δ -function models
 - dielectronic recombination
- publication plan
 - RGS
 - LETG
- General questions
 - Requirements for “VO” emission-line servers
 - Support for Laboratory Astrophysics
 - Request new measurements ?
 - XSPEC vmekal
 - Other targets
